DESCRIPTION

The IOTA **SDC1-120-24-25** delivers solid conversion of 120 Vac voltage to 27.2 Vdc for both power conversion and battery charging applications. As a power converter, the **SDC1-120-24-25** tightly controls and regulates the DC output, enabling the user to safely operate any appropriate nominal DC load up to the converter's rated output current. As a battery charger, the **SDC1-120-24-25** will maintain the battery, delivering its full-rated current when the battery capacity falls sufficiently low. The **SDC1-120-24-25** minimizes undue stress to the battery by delivering the maximum current for only the necessary period of time. As the battery nears its full capacity, the **SDC1-120-24-25** will float-charge the battery to prevent self-discharge of the battery cells.

(includes 4-Stage AmpLife Controller)

AMPLIFE AL1 CHARGE CONTROL (optional)

The SDC1 features an accessory port on the fan end of the unit for installing an AmpLife Charge Control Module for automatic four-stage charging.

Installing the AmpLife Charge Control Module gives the user the benefit of automatic Bulk, Absorption, and Float stage charging. This increases the charging capacity of the IOTA charger, decreases charge times and insures proper and safe battery charging without over-charging. To install an AmpLife module into the charger, remove the fastening screw on the top of the port faceplate and detach the faceplate. Plug the control module into the port and secure in place using the original fastening screw. NOTE: the port faceplate and AmpLife control module are similar in appearance. You can recognize the AmpLife Charge Control Module by the presence of the LED indicator on the face.

INSTALLATION OVERVIEW

Disconnect the positive side of the battery before installation. Connect the positive and negative terminal lugs to the battery or load. Always use the proper size wire based on the amperage of the converter and the battery. When connecting to a battery, a breaker should be installed within 18" of the battery, connecting the battery positive to the line side of the breaker, and the **SDC1-120-24-25** to the load side. Connect "Chassis Bonding Lug" on the **SDC1-120-24-25** to vehicle chassis or other grounding source.

When the **SDC1-120-24-25** AC input cord is connected to a 120 volt 3-wire grounded source, the blue LED indicator on the unit will illuminate. See specification table (page 1) for maximum current draw and required input voltages. For complete installation guidelines, refer to the installation manual.
